Mother is given a number and a card is made for that number where the information is kept

Born place would be town and state or common wealth and Provence

Address will locate the house so we can determine if it is in a danger zone, or near commercial or military bases (places that might have pollution)

Check hospital or home so we can identify any problems with hospital if that is a common denominator

You can print a list of aliments and place a check mark for each so we can see at a glance if any common with other children
